DEVICE TEST

1, Explain behaviour of hub device

- *. Hub is Layer 1 device
- *. It broadcast any received electrical signal or data bit to every other ports.
- *. This will cause high network traffic
- *. When two devices communicate at same time, collision will occur.

2, Explain behaviour of switch device

- *. Switch is Layer 2 device
- ~~*. It will check receiving source destination IP address~~
- ~~*. Check incoming data frame source MAC,~~
- *. It build MAC table by devices MAC address and port number.
- *. If Destination MAC exist in switch it will do unicast, 1 port to another port
- *. MAC doesn't exist, it will do Broadcast, 1 port to all other ports to find destination MAC address.
- *. This called as single broadcast domain

3, Explain behaviour of router device

- *. Router is Layer 3 device
- *. In router each Network should be different
- *. Each port on a router has its own unique IP address
